

Power Everything With Tesla Powerwall 3

Whole-home backup solution offering more powerful battery performance for increased savings.

Best Value

- Powerwall receives over-the-air updates to add new features and enhance existing ones such as: Charge on Solar, Time-Based Control and Virtual Power Plant
- Effortless battery expansion, now or later, with plug and play energy additions

More Savings

- Solar energy is captured more efficiently with the fully integrated solar inverter with a DC Coupled architecture and the option to retrofit and AC Couple an existing solar system
- Analyses historical energy use data and forecasts weather and energy to optimise energy usage

Most Durable/Reliable

- Engineered to perform over a large temperature range
- Intelligently controls its temperature for optimal performance even in challenging climates

More Power

- The integrated solar inverter efficiently converts solar energy into stored electricity, allowing the system to capture more solar energy in the process
- Powerwall provides backup with little interruption when grid connection goes down

EV Integration

- Charge on Solar - Use excess solar generated to 'drive on sunshine'
- Off-grid charging - Charge your vehicle from solar, even while the grid is down
